

Company Name: Best of Dublin Publishing

Project Name: Best of Dublin

Funding: Innovation Voucher

Online socially curated guide to the city of Dublin aimed at businesses, locals and tourist markets. Build a profile of the places users go and the services they use, generating shareable 'guides' to top places.

PROBLEM TO BE SOLVED

Technology stack options and accompanying logical architecture roadmap for the development of a full stack solution for Best of Dublin. Back-end infrastructure capable of handling, processing, and exposing data required to construct user "footprints" and generation of recommendations between users. Mobile application strategy for multiple platforms, namely iOS and Android.

HOW GATEWAY DELIVERED SOLUTION FOR INDUSTRY

The solution for was delivered over three phases. An initial information gathering session to gain a full understanding of the project proposal, get to know the stakeholders. A second meeting to deliver logical architectures and components, and finally a complete report including recommended alternative technology options and rough estimates for development.

IMPACT FOR THE COMPANY

The final technical analysis report, and the interactions with Best of Dublin, provided a roadmap for future options on the development of the solution. Specifically, the components required, technologies used to implement these services, recommendations on technologies used, and the skill-set required for development.
